

DEFINED CONTRIBUTION PLAN PARTICIPANTS' ACTIVITIES

First Half 2010

Sarah Holden, ICI Senior Director of Retirement and Investor Research, prepared this report.

The Investment Company Institute (ICI) is the national association of U.S. investment companies. ICI seeks to encourage adherence to high ethical standards, promote public understanding, and otherwise advance the interests of funds, their shareholders, directors, and advisers.

KEY FINDINGS

- » **DC plan withdrawal activity in the first half of 2010 was slightly higher than in the same time period a year earlier, though hardship withdrawal activity was the same.** In the first half of 2010, 2.1 percent of DC plan participants took withdrawals, compared with 1.8 percent in the first half of 2009. Levels of hardship withdrawal activity remained low. Only 0.9 percent of DC plan participants took hardship withdrawals during the first half of 2010, the same as in the first half of 2009.
- » **The share of participants that stopped making contributions in the first half of 2010 was significantly lower than the share that stopped contributing in the first half of 2009.** Only 1.5 percent of DC plan participants stopped contributing in the first half of 2010, compared with 4.6 percent during the first half of 2009.
- » **As stock values wandered down and then up and then down again during the first six months of the year, most DC plan participants stayed the course with their asset allocations.** In the first half of 2010, 6.6 percent of DC plan participants changed the asset allocation of their account balances and 6.3 percent changed the asset allocation of their contributions. These levels of reallocation activity were lower compared with the activity observed a year earlier.
- » **DC plan participants' loan activity edged up during the first half of 2010, although it was still in line with experience of the past several years.** At the end of June 2010, 17.5 percent of DC plan participants had loans outstanding, compared with 16.5 percent at year-end 2009 and 17.0 percent at year-end 2004.

INTRODUCTION

Defined contribution (DC) plan assets are a significant component of Americans' retirement assets, representing more than one-quarter of the total retirement market (Figure 1) and almost one-tenth of U.S. households' aggregate financial assets in the second quarter of 2010.¹ In an effort to measure participant-directed changes in DC plans, ICI has been tracking participant activity through recordkeeper surveys since 2008.² This update reports results from ICI's survey of a cross-section of recordkeeping firms representing a broad range of DC plans and covering nearly 24 million employer-based DC retirement plan participant accounts as of June 2010. The broad scope of the recordkeeper survey provides valuable inferences about recent withdrawal, contribution, asset allocation, and loan decisions of participants in these plans. The most recent survey covered DC plan participants' activities in the first six months of 2010, while stock prices trended downward through early February, then rose through late April, before falling again by the end of June (Figure 2).³ On net, the S&P 500 total return stock index was down 6.7 percent over the first half of 2010.

FIGURE 1

26 Percent of U.S. Retirement Assets Were Defined Contribution Plan Assets

Trillions of dollars, end-of-period, selected time periods

¹Annuities include all fixed and variable annuity reserves at life insurance companies less annuities held by IRAs, 403(b) plans, 457 plans, and private pension funds (including 401(k) plans).

²Federal pension plans include U.S. Treasury security holdings of the civil service retirement and disability fund, the military retirement fund, the judicial retirement funds, the Railroad Retirement Board, and the foreign service retirement and disability fund. These plans also include securities held in the National Railroad Retirement Investment Trust and Federal Employees Retirement System (FERS) Thrift Savings Plan (TSP).

³Other DC plans include 403(b) plans, 457 plans, and private employer-sponsored DC plans without 401(k) features.

^eData are estimated.

^PData are preliminary.

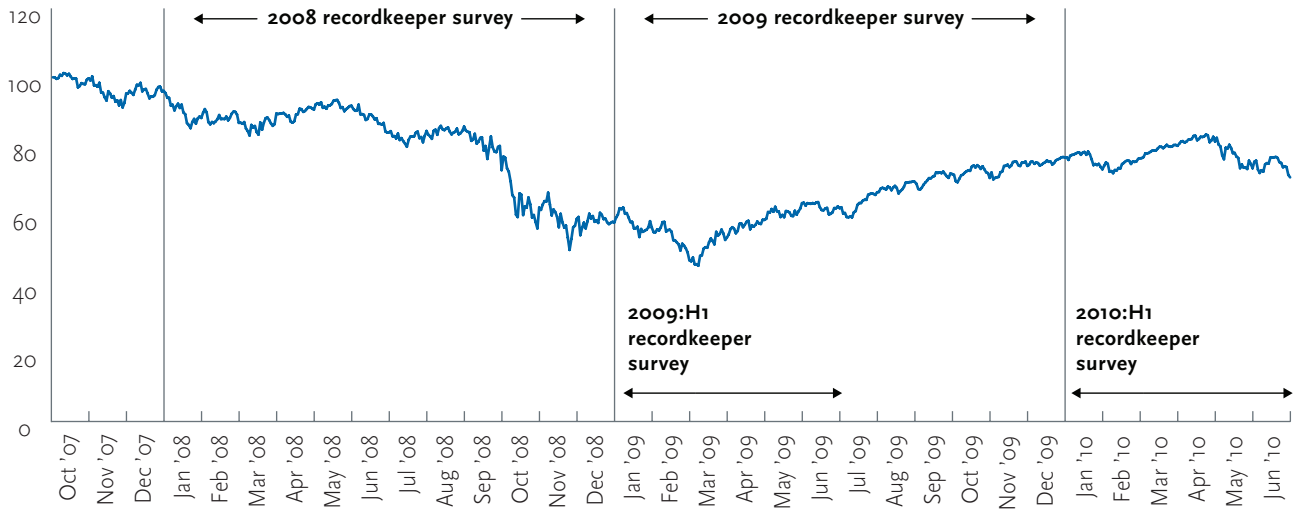

Note: Components may not add to the total because of rounding.

DC PLAN PARTICIPANTS' ACTIVITIES IN 2010:H1

The *withdrawal and contribution data* indicate that essentially all DC plan participants continued to save in their retirement plans at work. DC plan participants' withdrawal activity⁴ during the first half of 2010 was in line with the same time period a year earlier, and a negligible share of participants stopped contributing during the first half of 2010. In the first six months of 2010, 2.1 percent of DC plan participants took withdrawals from their DC plan accounts, with 0.9 percent taking hardship withdrawals (Figure 3).⁵ While hardship withdrawal activity was similar to the first six months of 2009, overall withdrawal activity was slightly higher.⁶ A lower percentage of DC plan participants stopped contributing in the first half of 2010 compared to a year earlier. In the first half of 2010, only 1.5 percent of DC plan participants stopped contributing, compared with 4.6 percent in the first half of 2009. It is possible that some of these participants stopped contributing because they reached the annual contribution limit.⁷

The current survey of recordkeeping firms also gathered information about *asset allocation changes* in DC account balances or contributions. During the first half of 2010, 6.6 percent of DC plan participants had changed the asset allocation of their account balances, compared with 7.7 percent in the first half of 2009 (Figure 3).⁸ Reallocation activity regarding contributions was also lower compared with the same time period a year earlier: 6.3 percent of DC plan participants had changed the asset allocation of their contributions in 2010:H1, compared with 9.3 percent in 2009:H1.

FIGURE 3
Defined Contribution Plan Participant Activities in the First Half of 2010
Summary of recordkeeper data; percentage of participants

Note: The samples include more than 22 million DC plan participants for data covering full-year 2008 and nearly 24 million DC plan participants for data covering full-year 2009, 2009:H1, and 2010:H1.

Source: ICI survey of DC plan recordkeeper data (January–December 2008; January–December 2009; January–June 2009; January–June 2010)

Loan activity edged up in the first half of 2010, although it remained in line with the experience of the past several years. As of June 2010, 17.5 percent of DC plan participants had loans outstanding, as reported by the sample of recordkeepers (Figure 4). At year-end 2009, the recordkeeper survey found that 16.5 percent of DC plan participants had loans outstanding.⁹ The EBRI/ICI 401(k) database for year-end 2004 found that 17.0 percent of 401(k) participants had loans outstanding at year-end 2004.¹⁰

FIGURE 4

401(k) Loan Activity

Percentage of 401(k) participants who had loans outstanding, end-of-period, 1996–2008, 2009:Q1–2010:Q2

Note: The EBRI/ICI data cover 401(k) plans; the ICI Survey of DC Plan Recordkeepers covers DC plans more generally (although the bulk of DC plans is 401(k) plans).

NOTES

- ¹ Total financial assets of U.S. households were \$43.7 trillion at the end of the second quarter of 2010. See Federal Reserve Board 2010.
- ² This report updates recordkeeper survey data first published for year-to-date October 2008 (see Reid and Holden 2008), then for full-year 2008 (see Investment Company Institute 2009a), then for the first half of 2009 (see Investment Company Institute 2009b), then for the first three-quarters of 2009 (see Holden, Sabelhaus, and Reid 2010), then for full-year 2009 (see Investment Company Institute 2010), and then for the first quarter of 2010 (see Holden 2010).
- ³ The S&P 500 total return index fell 5.1 percent between December 31, 2009, and February 8, 2010. It then rose 15.6 percent between February 8 and April 23, 2010, and then fell 15.0 percent between April 23 and June 20, 2010.
- ⁴ The withdrawal rates observed for 2009 (3.1 percent of DC plan participants with withdrawals; 1.6 percent with hardship withdrawals) were similar to those for 2008 (3.9 percent of DC plan participants with withdrawals; 1.3 percent with hardship withdrawals), which were in line with past years' experiences among the recordkeepers and the rate of withdrawal activity observed in the EBRI/ICI 401(k) database in 2000 (at the beginning of the 2000–2002 bear market in equities). The Employee Benefit Research Institute (EBRI) and ICI collaborate on an annual 401(k) data collection project. Analysis of the 2000 EBRI/ICI 401(k) database found that 4.5 percent of active 401(k) plan participants had taken in-service withdrawals, including hardship withdrawals. Withdrawal activity varied with participant age; participants younger than 60 were much less likely to take withdrawals compared with participants in their sixties. See Holden and VanDerhei 2002.
- ⁵ There are two types of withdrawals possible from DC plans: nonhardship and hardship. An in-service withdrawal occurs if the participant is still employed by the plan sponsor. Generally, participants withdrawing after age 59½ are categorized as nonhardship withdrawals. A participant seeking a hardship withdrawal must demonstrate financial hardship and generally faces a 10 percent penalty on the taxable portion of the withdrawal. If a plan allows loans, participants are generally required to first take a loan before they are permitted to take a hardship withdrawal.
- ⁶ The comparison is made to the similar time period a year earlier for two reasons. First, the length of time analyzed is the same (six months). Second, if there are any effects that are typical for the beginning of the year (e.g., people getting bonuses to invest, profit-sharing contributions may occur in the first quarter, people reacting to upcoming taxes, people reacting to past holiday spending), then it is important to compare time periods that may experience these similar “seasonal” effects. In addition to these seasonal effects, DC plan participant activity may be influenced by cyclical factors (e.g., recent stock market returns).
- ⁷ The recordkeepers typically remove participants who are no longer working for the employer sponsoring the plan. It would not be correct to include such separated, retired, or terminated participants, because they cannot contribute. The goal of the survey is to measure the activity of active DC plan participants.
- ⁸ See note 6. Whereas some participants may visit their asset allocations at the beginning of the year and not again, it is not possible to translate the year-to-date figures into an estimate of activity for the whole year.

Annual rates of account balance reallocation activity observed in the ICI Survey of DC Plan Recordkeepers for 2008 and 2009 are consistent with the behavior observed in earlier years in other data sources. Historically, recordkeepers find that in any given year, DC plan participants generally do not rebalance in their accounts (for references to this research, see note 80 in Holden, Brady, and Hadley 2006; and discussion of changes in asset allocation and note 39 in Holden, VanDerhei, and Alonso 2009).
- ⁹ This figure is revised downward slightly from the 16.8 percent originally reported in Investment Company Institute 2010.
- ¹⁰ The EBRI/ICI 401(k) database update reports loan activity among 401(k) participants in plans that allow loans. At year-end 2008, 88 percent of participants in the database were in plans that offer loans; among those participants, 18 percent had a loan outstanding at year-end 2008. This translates to 16 percent of all active 401(k) participants having a loan outstanding. The year-end 2008 EBRI/ICI database includes statistical information about 24.0 million 401(k) participants in 54,765 plans, with \$1.092 trillion in assets. See Holden, VanDerhei, and Alonso 2009.
